Visa Status: Requires S-Pass/EP (MOE Bonded – Eligibility Letter Available)

SKILLS

Programming Languages:
C#, C++, Python, Java, JavaScript/TypeScript, SQL, Dart

Frontend:
React, Zustand, Electron, Next.js, Vue.js, Tailwind CSS, HTML/CSS, Flutter

Backend:
Node.js, PostgreSQL, REST API, Microsoft SQL, FastAPI

ML / AI / Data Science:
Pandas, NumPy, PyTorch, TensorFlow, Keras, Hugging Face Transformers, Scikit-Learn, OpenCV, NLP, Deep Learning, Computer Vision

Tools & Platforms:
Git/GitHub, Azure DevOps, VS Code, Cloud Deployments (Azure, Vercel)

AWARDS

IRAS Book Prize: Silver Award 2025
IRAS Book Prize: Gold Award 2024
vSplash Awards: First Runner-up (2020): Assurance Project, Computer vision prototype analysing car damage photos for repair cost estimation.

PolyFinTech100 API Hackathon: First Runner-up (2020): Kindred United Project, Family web app with facial recognition login and emotion-tracking features.

Director's Roll of Honour (2018)

LANGUAGES

English: Advanced
Indonesian: Native
Malay: Advanced

SUMMARY

Computer Science graduate (Machine Learning & AI specialisation) with industry experience at NEC Asia Pacific and a portfolio across full-stack, mobile, applied ML, and C++ systems work. Recent work includes Trackery (Electron/React), TogetherSafe (Flutter capstone), OtoDecks (C++ DJ application using JUCE framework), and a BERT-based fake news classifier. IRAS Gold and Silver Prize recipient.

WORK EXPERIENCE

NEC Asia Pacific Pte Ltd - Singapore (02/2021 - 04/2021)
Assistant Engineer (Contract)

- Returned to address the bulk-insert performance issues from the migration. Reworked SQL queries and adjusted the schema so the IMS could handle large data injections without the slowdowns we saw during the original load.
- Built a Flutter companion mobile app connecting to the IMS C# backend via REST APIs, extending desktop functionality to staff on the floor.
- Shipped additional web features based on direct feedback from admin staff using the system daily.

NEC Asia Pacific Pte Ltd - Singapore (09/2020 - 01/2021)
Application Developer (Intern)

- Led a team of three interns to build an enterprise Inventory Management System from scratch in five months, replacing the department's Excel workflow with a web platform deployed on Azure.
- The department had no in-house developers, so we ran weekly check-ins with the manager ourselves, gathered requirements directly from admin staff, and handled deployment end-to-end.
- Loaded 100,000+ rows of legacy Excel data into the new system, which surfaced clear performance issues with how the initial schema handled bulk inserts.
- Used C# / ASP.NET on the backend with Microsoft SQL, working in Agile sprints.

EDUCATION

04/2023 - 04/2026
Singapore Institute of Management
Bachelor of Science (Honours) in Computer Science (Machine Learning & AI)
04/2018 - 04/2021
Republic Polytechnic
Diploma in Information Technology

TECHNICAL PROJECTS

Trackery | Lead Developer
Desktop inventory app I built for a family business, replacing their pen-and-paper purchase orders and sales tracking. Designed the PostgreSQL schema around real business operations after sitting with the owners to understand their workflow. Built with React, Electron, Zustand, and Node.js.

TogetherSafe | Final Year Project
Flutter capstone for Singapore emergency preparedness. Two modes: a Calm mode with gamified preparedness challenges (points, streaks, community goals), and a high-contrast Emergency mode for active crises. Pulls live alert data via REST APIs.

Fake News Classification | NLP Coursework
Fine-tuned BERT for 6-class classification on the LIAR dataset using Hugging Face Transformers. Built a custom AdvancedBERTClassifier with attention pooling on top of BertModel, benchmarked against a TF-IDF + Logistic Regression baseline.

OtoDecks DJ Application | University Project (C++, JUCE Framework)
Dual-deck DJ audio application in C++ using the JUCE framework. Real-time audio source chaining with IIR filtering and resampling, custom GUI for dual decks and playlist, smart pointer resource management.

Portfolio Website
Next.js, TypeScript, Tailwind, with Framer Motion handling scroll animations. Built with reusable components for easy iteration.
