SUMMARY

Computer Science graduate with First Class Honours, with hands-on experience across full-stack development, AI, and shipping projects end-to-end. Built a production C#/ASP.NET system at NEC, an agentic AI research assistant in LangGraph, and a retrieval-augmented generation app from scratch, taking each from an idea to something that runs in front of real users. Comfortable in C#, Python, JavaScript/TypeScript, and SQL, and quick to pick up unfamiliar stacks. IRAS Gold and Silver Prize recipient.

WORK EXPERIENCE

NEC Asia Pacific Pte Ltd - Singapore Feb 2021 - Apr 2021
Assistant Engineer (Contract)

- Traced and fixed a bulk-insert performance problem from a large data migration, reworking the SQL queries and schema so the system kept up under heavy data loads.
- Built a Flutter companion mobile app connecting to the IMS C# backend via REST APIs, extending the desktop system to staff working on the floor.
- Shipped additional web features based on direct feedback from the admin staff using the system every day.

NEC Asia Pacific Pte Ltd - Singapore Sep 2020 - Jan 2021
Application Developer (Intern)

- Led a team of three interns to build an enterprise Inventory Management System from scratch in five months, in C#/ASP.NET with Microsoft SQL on Azure, replacing the department's Excel workflow, working in Agile sprints.
- Built role-based access for four user types, loan and return approval workflows with PDF generation, reporting, a live dashboard, and audit logging.
- Gathered requirements directly from admin staff, prepared technical documentation, and handled deployment end-to-end.
- Migrated 100,000+ rows of legacy Excel data into the new system.

EDUCATION

University of London - Singapore Institute of Management Apr 2023 - Apr 2026
Bachelor of Science (Honours) in Computer Science (Machine Learning & AI) - First Class Honours

Republic Polytechnic Apr 2018 - Apr 2021
Diploma in Information Technology

SKILLS

Programming Languages: C#, C++, Python, JavaScript/TypeScript, SQL, Dart, Java

ML / AI / Data Science: Agentic AI, AI Agents, LangGraph, LangChain, LangSmith, RAG, Embeddings, Vector Databases, LLM Integration, Pandas, NumPy, PyTorch, TensorFlow, Hugging Face Transformers, Scikit-Learn, NLP, Deep Learning

Frontend: React, Zustand, Electron, Next.js, Vue.js, Tailwind CSS, Sanity, HTML/CSS, Flutter

Backend: FastAPI, Node.js, PostgreSQL, MySQL, REST API, Microsoft SQL, ChromaDB, Entity Framework Core, Docker

Tools & Platforms: Git/GitHub, pytest, Azure DevOps, VS Code, Claude Code, GitHub Copilot, Cloud Deployments (Azure, Vercel, Hugging Face Spaces, Netlify)

TECHNICAL PROJECTS

Let It Cook | Agentic AI Research Assistant (Python, LangGraph, LangChain, FastAPI, Next.js)
Built an agentic AI research assistant in LangGraph implementing the four core agentic patterns, planning, tool use, memory, and reflection, as a custom stateful graph. Gave it three tools behind a clean interface and used LLM function calling to choose between web search, document retrieval (RAG over ChromaDB), and a calculator. Added a self-correction loop with structured output so it reviews and revises its own answers, short-term memory via LangGraph checkpoints, and LangSmith for end-to-end tracing.

Pull The Receipts | Source-grounded Document Q&A (Python, FastAPI, ChromaDB, Next.js, Docker)
Built a retrieval-augmented generation system from scratch without LangChain, with vector retrieval and inline citations, that refuses when its sources don't cover the question. Deployed across Hugging Face Spaces and Vercel.

Fake News Classifier | Fine-tuned BERT with Deployed API (Python, PyTorch, Hugging Face, FastAPI)
Built and compared five models, then fine-tuned BERT and lifted its accuracy from 68 to 71 percent by adding speaker and source metadata. Served behind a Dockerised FastAPI backend with a Next.js frontend.

Howlennz | Client Website (Next.js, TypeScript, Tailwind, Sanity CMS)
Built and shipped a live website for a Live2D artist, turning the design into reusable components and a CMS the client updates without touching code. A pro-bono client project, live and in use.

AWARDS

IRAS Book Prize: Silver Award 2025 & Gold Award 2024

vSplash Awards - First Runner-up (2020): Assurance Project, computer vision prototype analysing car damage photos for repair cost estimation.

PolyFinTech100 API Hackathon - First Runner-up (2020): Kindred United Project, family web app with facial recognition login and emotion-tracking features.
