

# Riski Linardi

Software Engineer

+65 9144 0677 | [riskilindari@gmail.com](mailto:riskilindari@gmail.com) | [riskilindari.vercel.app](https://riskilindari.vercel.app) | [linkedin.com/in/riski-linardi](https://linkedin.com/in/riski-linardi) | [github.com/riskilindari](https://github.com/riskilindari)

## SUMMARY

First Class Honours Computer Science graduate. Ran a three-person team through a five-month build at NEC Asia Pacific, then stayed on contract to fix what broke as data volume grew. Works mainly in Python and TypeScript, with earlier production work in C#. Recent projects include a deployed AI agent that plans and checks its own answers, and a stock and orders tool a small business now runs its reporting on.

## WORK EXPERIENCE

### NEC Asia Pacific Pte Ltd - Singapore

Feb 2021 – Apr 2021

*Assistant Engineer (Contract)*

- Cleared a bulk-insert bottleneck that only appeared under production data volume, tracing it to the SQL queries and schema design and reworking both.
- Shipped web features driven by direct feedback from the admin staff using the system daily.
- Built a Flutter mobile app connected to the C# backend over REST APIs, extending the system to staff working on the floor.

### NEC Asia Pacific Pte Ltd - Singapore

Sep 2020 – Jan 2021

*Application Developer (Intern)*

- Replaced a manual, spreadsheet-based inventory process with an automated system covering approval routing, reporting and a live monitoring dashboard, delivered in five months of Agile sprints and adopted by the admin team that ran the process.
- Migrated and validated over 100,000 rows of legacy records from spreadsheets into a new relational schema, mapping and reconciling the data against the original.
- Sat with the business users to decide what was worth automating, led three interns through the build in C# and ASP.NET on Microsoft SQL Server, and wrote the configuration documentation and user guides handed over with the system.

## EDUCATION

### University of London - Singapore Institute of Management

Apr 2023 – Apr 2026

*Bachelor of Science (Honours) in Computer Science (Machine Learning and AI), First Class Honours*

### Republic Polytechnic

Apr 2018 – Apr 2021

*Diploma in Information Technology*

## SKILLS

**Languages:** Python, SQL, JavaScript, TypeScript, C#, Dart

**Web & Application Development:** React, Next.js, Node.js, ASP.NET, FastAPI, Flutter, REST APIs, Entity Framework

**Databases & Cloud:** Microsoft SQL Server, PostgreSQL, MySQL, Stored Procedures, Docker, Azure

**AI & Data:** Large Language Model (LLM) Integration, Retrieval-Augmented Generation (RAG), AI Agents, LangGraph, LangChain, ChromaDB, PyTorch, Scikit-Learn, Pandas, NumPy

**Practices:** Requirements Gathering, Agile, Automated Testing, Debugging & Root Cause Analysis, Technical Documentation, Git, GitHub

## TECHNICAL PROJECTS

### [Let It Cook | AI Agent \(Python, LangGraph, LangChain, FastAPI, Next.js\)](#)

AI agent built as a custom stateful graph that plans a task, picks its tool, then checks its own answer. Tools include web search and retrieval over a document store. Served through a streaming FastAPI backend to a Next.js front end, Dockerised and deployed.

### [Trackery | Business Tool and Reporting Dashboard \(React, TypeScript, Node.js, PostgreSQL\)](#)

Stock, orders and receivables system for a small business, with a dashboard covering sales trends, ageing receivables, stock value by warehouse and low-stock alerts. In live use, and most of what it does now came from what the owners asked for once they had the first version in front of them.

### [TogetherSafe | Mobile App \(Flutter, Dart\)](#)

Emergency preparedness app for Singapore, built as a final-year capstone. Two interfaces in one app: a calm mode that builds habits through streaks and community goals, and a high-contrast emergency mode stripped back for an active crisis. Live alert data pulled over REST APIs.

### [Pull The Receipts | Retrieval-Augmented Generation \(Python, FastAPI, ChromaDB, Next.js\)](#)

Document question-answering system built from scratch without an orchestration framework: chunking, embeddings, vector retrieval and prompt augmentation. Cites the file and page behind every answer, and declines when the sources do not cover the question.

## AWARDS

- IRAS Book Prize: Gold Award (2024), Silver Award (2025).
- vSplash Awards First Runner-up (2020) and PolyFinTech100 API Hackathon First Runner-up (2020).
