SUMMARY

Computer Science graduate specialising in Machine Learning and AI, with hands-on experience across full-stack development, machine learning, and shipping projects end-to-end. Built and deployed a production C#/ASP.NET system at NEC, a retrieval-augmented generation app from scratch, and a fine-tuned BERT classifier, each taken from idea to a working, deployed product. Comfortable in C#, Python, JavaScript/TypeScript, and SQL, and quick to pick up unfamiliar stacks. IRAS Gold and Silver Prize recipient.

WORK EXPERIENCE

NEC Asia Pacific Pte Ltd - Singapore

Feb 2021 - Apr 2021

Assistant Engineer (Contract)

- Diagnosed and resolved bulk-insert performance issues from the large data migration, reworking the SQL queries and schema so the system handled large data loads efficiently.
- Built a Flutter companion mobile app connecting to the IMS C# backend via REST APIs, extending desktop functionality to staff on the floor.
- Shipped additional web features based on direct feedback from admin staff using the system daily.

NEC Asia Pacific Pte Ltd - Singapore

Sep 2020 - Jan 2021

Application Developer (Intern)

- Led a team of three interns to build an enterprise Inventory Management System from scratch in five months, in C#/ASP.NET with Microsoft SQL on Azure, replacing the department's Excel workflow, working in Agile sprints.
- Built role-based access for four user types, loan and return approval workflows with PDF generation, reporting, a live dashboard, and audit logging.
- Gathered requirements directly from admin staff, prepared technical documentation, and handled deployment end-to-end.
- Migrated 100,000+ rows of legacy Excel data into the new system.

EDUCATION

Singapore Institute of Management

Apr 2023 - Apr 2026

Bachelor of Science (Honours) in Computer Science (Machine Learning & AI)

Republic Polytechnic

Apr 2018 - Apr 2021

Diploma in Information Technology

SKILLS

Programming Languages: C#, C++, Python, JavaScript/TypeScript, SQL, Dart, Java

Frontend: React, Zustand, Electron, Next.js, Vue.js, Tailwind CSS, Sanity, HTML/CSS, Flutter

Backend: Node.js, PostgreSQL, MySQL, REST API, Microsoft SQL, FastAPI, Asynchronous API Integration, ChromaDB, Entity Framework Core

ML / AI / Data Science: Pandas, NumPy, PyTorch, TensorFlow, Keras, Hugging Face Transformers, Scikit-Learn, RAG (Retrieval-Augmented Generation), Embeddings, sentence-transformers, NLTK, spaCy, OpenCV, NLP, Deep Learning

Tools & Platforms: Git/GitHub, Docker, pytest, Azure DevOps, VS Code, Claude Code, GitHub Copilot, Cloud Deployments (Azure, Vercel, Hugging Face Spaces, Netlify)

TECHNICAL PROJECTS

Pull The Receipts | Source-grounded Document Q&A (RAG) (Python, FastAPI, ChromaDB, Next.js, Docker)

Built a retrieval-augmented generation pipeline from scratch (chunking, embeddings, vector retrieval, prompt augmentation, generation), grounding answers in retrieved chunks with inline citations and refusing when sources don't cover the question. Designed swappable embedding, vector-store, and LLM interfaces with an offline-fakeable test suite, and deployed the FastAPI backend on Hugging Face Spaces with a Next.js frontend on Vercel.

Fake News Classifier | Machine Learning, Deployed End-to-End (Python, PyTorch, FastAPI, Docker, Next.js)

Built and compared five models for fake-news detection; found text-only accuracy plateaus near 68% and lifted BERT to 71% by adding speaker and source metadata. Deployed end-to-end with a Dockerised FastAPI backend (with tests) and a Next.js frontend. Self-taught the deployment stack.

Trackery | Full-Stack Desktop App (React, Electron, Node.js, PostgreSQL)

Full-stack inventory tool built for a business, with a React and Electron frontend, a Node.js backend, and a PostgreSQL schema designed around the owners' workflow. Currently in testing with the owner.

CO2 Emissions Regression | Data Science (Python, Pandas, Scikit-learn)

Cleaned and merged five inconsistent multi-source datasets, then performed feature engineering and built a regression model reaching $R^2 = 0.9376$, with analysis and visualisation.

AWARDS

IRAS Book Prize: Silver Award 2025 & Gold Award 2024

vSplash Awards - First Runner-up (2020): Assurance Project, computer vision prototype analysing car damage photos for repair cost estimation.

PolyFinTech100 API Hackathon - First Runner-up (2020): Kindred United Project, family web app with facial recognition login and emotion-tracking features.
